CAREER OBJECTIVE

Recent B.Tech (Electronics & Telecommunication) graduate seeking an Analyst role in Data Intelligence, with project experience in SQL, Python, Excel, Power BI, and Tableau. Skilled in data cleaning, validation, transformation, relational data analysis, and dashboard development, with a focus on presenting KPI insights that support business decisions. Keen to grow in ETL, data pipelines, and automation.

TECHNICAL SKILLS

SQL (Joins, CTEs, Views, Stored Procedures, Aggregation) | Python (Pandas, NumPy) | Microsoft Excel (Power Query, Pivot Tables, Advanced Formulas) | Data Cleaning, Validation & Transformation | Microsoft Power BI (DAX, Power Query) | Tableau | DBMS & Relational Data Concepts | Documentation & Reporting | Agile | SDLC | Business Statistics | Google Sheets

SOFT SKILLS

Problem Solving | Critical Thinking | Attention to Detail | Communication | Business Understanding | Cross Cultural Collaboration | Teamwork | Time Management

PROJECTS

Amazon Marketplace Intelligence Dashboard *Excel (Power Query, Pivot Tables, Advanced Formulas)*

Business scenario: simulated a Business Analyst brief for Amazon's Category Management team using a real Amazon sales dataset.

- Cleaned and validated raw, messy data using Power Query, handling formatting issues and null values to ensure accuracy before analysis.
- Built percentile based benchmarks with pivot tables and formulas to flag discount vs. satisfaction mismatches and under promoted products; designed a Value Score by category to guide a Finance facing marketing recommendation.
- Delivered an interactive dashboard with KPI cards, slicers, and conditional formatting for stakeholder self service.

SQL Driven Fraud Detection: Closing the Gap in Transaction Risk Scoring *SQL (MySQL), Tableau*

Business scenario: built a SQL based fraud detection layer for a digital payments company, using a 6.3M row PaySim transaction dataset.

- Bulk loaded and normalized 6.3M rows into a relational MySQL schema (accounts, transaction_types, transactions with primary/foreign keys), resolving packet size limits, timeouts, and duplicate loads.
- Built a stored procedure with balance validation and rollback, and a risk scoring function using four weighted rules (type, balance drain, large amount, balance mismatch), designed without the fraud label to avoid data leakage.
- Created SQL views comparing the new score against the baseline flag, raising fraud recall from 0.19% (16 of 8,213) to 94–98% (7,750–8,012 caught), and built a Tableau dashboard with KPI cards.
- Tested a stricter threshold variant, documented the precision/recall trade off, and recommended the high recall version to prioritize fraud coverage.

Zomato Global Performance Dashboard *Power BI*

Business scenario: analyzed 9,500+ restaurants across 15 countries to support market expansion, quality improvement, and customer engagement decisions.

- Cleaned and transformed real world restaurant data using Power Query, resolving encoding, null value, and formatting issues.
- Built DAX measures and interactive visuals to compare country/city performance, pricing vs. ratings, service features, and cuisine trends.

AI & INTERNATIONAL EXPOSURE

Study Tour Program for AI *INTI International University, Nilai, Malaysia | Sep–Oct 2025*

- Selected for an international study tour on modern AI tools, automation platforms, and applied ML workflows; strengthened cross cultural collaboration.

CERTIFICATIONS

- Business Analysis A to Z Masterclass (Udemy, 11.5 hours) | Oct 2026

EDUCATION

B.Tech, Electronics & Telecommunication Engineering, SVERI's College of Engineering, Pandharpur 2022 to 2026 | 81.03%

12th Standard, Sri Chaitanya Junior College, Pune 2022 | 84.33%

10th Standard, Vasantdada Patil School, Lohara 2020 | 94.20%
